## Panavision Australia Catalogue for iPod Instructions

### About

The *Panavision Australia Catalogue for iPod* displays a text based version of the 2006 Panavision Australia rental catalogue on your iPod using the **Notes** facility.

### System Requirements

- Apple iPod with dock connector (including iPod photo, iPod nano and iPod mini)
- iPod Software version 2.0 or later (or any iPod mini, iPod photo or iPod nano software)
- 580 Kb of free disc space on the iPod

### Installation

Connect your iPod to your computer via the dock connector. Your iPod must be **enabled for disc use** to transfer files.

For additional help with using your iPod as a hard disc, please log on to: [www.apple.com/support/ipod](http://www.apple.com/support/ipod)

Copy the *Panavision Australia* folder to the **Notes** folder of your iPod.

You can then access the 2006 Panavision Australia catalogue by selecting **Extras** then **Notes** on your iPod.

**NOTE:** The first time you select **Notes** after performing an update, the iPod will load the new notes into it's memory cache. Your iPod may display a **Notes Loading** message. This may take up to a full minute depending on your iPod model. Please be patient. This cache update will only occur the first time you select **Notes** after updating. It will not occur every time **Notes** is selected.
